

distillation, can give various products among which naphthalene could be one of the products.

Hence, the correct option is (d).

12. The general formula corresponding to saturated hydrocarbons should be C_nH_{2n+2} . According to this, the given hydrocarbon with 14 hydrogen atoms should be C_6H_{14} .

Hence, the correct option is (a).

13. Phosgene and CO are poisonous gases coal gas contains CO and CH_4 which are harmful. Butane is not a harmful gas.

Hence, the correct option is (c).

14. Pyrolysis is the process of heating of hydrocarbon in the absence of air.

Hence, the correct option is (d).

15. Since X and Y are gaseous fuels, they do not produce any residue on burning. X may have higher calorific value than Y and could be ignited at a lower temperature than y.

Hence, the correct option is (a)

Assessment Test III

1. Graphite is a crystalline allotrope of carbon.

Hence, the correct option is (a).

2. Sand is the raw material used for the manufacture of graphite in Acheson.

Hence, the correct option is (d).

3. Diamond cannot be used as solid lubricant since it is the hardest substance.

Hence, the correct option is (c).

4. Sugar charcoal is used to extract metals from their oxides because of its high purity and reactivity.

Hence, the correct option is (a).

5. $CaCO_3 + 2HCl \rightarrow CaCl_2 + CO_2 + H_2O$

CO_2 is produced but not CO.

Hence, the correct option is (d).

6. Since CO is a neutral oxide, it does not dissolve in water and can be collected by downward displacement of water.

Hence, the correct option is (a).

7. Since the combustion of CO is highly exothermic, it is used as the constituent of many fuels.

Hence, the correct option is (a).

8. The correct order is DCBA.

Hence, the correct option is (d).

9. The correct order is CBAD.

Hence, the correct option is (d).

10. $CaC_2 + H_2O \rightarrow C_2H_2 + Ca(OH)_2$
 Calcium carbide Acetylene Calcium hydroxide

Hydrolysis of CaC_2 liberates C_2H_2 .

Hence, the correct option is (b).

11. The given reaction is involved in foam-type fire extinguisher.

Hence, the correct option is (c).

12. The formation of $CaCO_3$ makes lime water milky, since it is insoluble.

Hence, the correct option is (b).

13. Anthracite contains the highest percentage of carbon.

Hence, the correct option is (a).

14. Photosynthesis traps atmospheric CO_2 .

Hence, the correct option is (b).

15. The correct matching is

(i) $\rightarrow$ (C)

(ii) $\rightarrow$ (A)

(iii) $\rightarrow$ (E)

(iv) $\rightarrow$ (B)

(v) $\rightarrow$ (D)

Hence, the correct option is (a).

Assessment Test IV

1. Since sugar charcoal is an amorphous allotrope, carbon atoms are not present in a regular pattern.

Hence, the correct option is (d).

2. CO gas is liberated during the manufacture of graphite in Acheson process.

Hence, the correct option is (b).

3. Graphite is used as solid lubricant because of its layered structure and high resistance to heat.

Hence, the correct option is (d).

4. Gas carbon is used for making electrodes for dry cell.

Hence, the correct option is (d).

5. Na_2CO_3 has high thermal stability. Hence, it does not undergo thermal decomposition to produce CO_2 gas.

Hence, the correct option is (d).

6. CO_2 is collected in the laboratory by upward displacement of air since it is heavier than air. It does not support combustion.

Hence, the correct option is (b).

7. CO_2 is not a reducing agent. It is used in fire extinguishers because it is heavier than air and does not support combustion.

Hence, the correct option is (c).

8. The correct order is ADBC.

Hence, the correct option is (b).

9. The correct order is BDAC.

Hence, the correct option is (c).

Ca(OH)_2 is basic in nature.

Hence, the correct option is (a).

11. Thermal decomposition of NaHCO_3 is associated with dry powder fire extinguisher.

Hence, the correct option is (a).

Hence, the correct option is (d).

13. Peat, since its carbon content is the least.

Hence, the correct option is (a).

14. Respiration releases CO_2 in the atmosphere.

Hence, the correct option is (c).

15. The correct matching is

(i) $\rightarrow$ (B)

(ii) $\rightarrow$ (D)

(iii) $\rightarrow$ (A)

(iv) $\rightarrow$ (E)

(v) $\rightarrow$ (C)

Hence, the correct option is (b).

CHAPTER 7

Some Important Elements and their Compounds

Assessment Test I

Hence, the correct option is (c).

Hence, the correct option is (a).

3. SO_2 , on treatment with excess water in the presence of oxygen, gives nascent hydrogen. Hence, SO_2 acts as a reducing agent. The nascent hydrogen produces on being exposed to moisture acts as a bleach mg agent. It reduces the coloured matter to colourless. This process is reversible. The colourless product, on exposure to atmospheric oxygen, can get oxidized and thus regains its colour.

Hence, the correct option is (a)

4. Since HNO_3 is a good oxidising agent, it oxidises the impurities present on the surface of gold, but does not react with gold.

Hence, the correct option is (c).

5. Liquid nitrogen is used as refrigerant. Zinc phosphide is used as rat poison. Sulphur is used in the manufacture of gunpowder.

Hydrogen sulphide is a good analytical reagent. H_2SO_4 is used in storage batteries.

Hence, the correct option is (a).

6. Aqueous solution of NH_3 on treatment with CuSO_4 solution gives a pale blue precipitate of $\text{Cu}(\text{OH})_2$.

Hence, the correct option is (a).

Hence, the correct option is (c).

8. X is white phosphorous and Y is red phosphorous. Red phosphorous is used in match industry. Both X and Y are allotropes and possess same chemical properties but different properties.

Hence, the correct option is (b).

9. Both rhombic sulphur and monoclinic sulphur are crystalline and soluble in CS_2 .

Hence, the correct option is (c).

10. Sugar, on treating with conc. H_2SO_4 , turns into a black-coloured mass due to removal of hydrogen and oxygen present in sugar as water.

Hence, the correct option is (c).

Hence, the correct option is (a).

Since X is soluble in water, it cannot be collected by either upward or by downward displacement of water.

Hence, the correct option is (b).

Hence, the correct option is (c).

14. Bakelite is a thermosetting plastic and is heat resistant due to cross-linked polymeric structure. Therefore, it cannot be remoulded.

Hence, the correct option is (c).

15. As Y is used in the match industry, it is red phosphorus and X is white phosphorus. In Y, each P_4 units are linked by P-P bonds.

Hence, the correct option is (c)

Assessment Test III

1. An electrostatic precipitator removes dust particles from air.

Hence, the correct option is (a).

2. Fractional distillation is used to isolate nitrogen from liquid air.

Hence, the correct option is (d).

3. Nitrogen is evolved by heating $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$.

Hence, the correct option is (a).

4. Red phosphorus is made up of chains of tetrahedral units of 4 phosphorus atoms, whereas white phosphorus is made up of discrete tetrahedral units. Hence, red phosphorus is less reactive.

Hence, the correct option is (c).

5. MnO_2 is one of the reactants in the laboratory preparation of chlorine.

Hence, the correct option is (c).

6. The correct order is BCDAE.

Hence, the correct option is (a).

7. The correct order is CDAB.

Hence, the correct option is (c).

8. Hydrogen is not present in bleaching powder. Formula of bleaching powder is CaOCl_2 . So, it has calcium, oxygen, and chlorine.

Hence, the correct option is (c).

9. Borosilicate glass has low coefficient of thermal expansion.

Hence, the correct option is (a).

10. Superphosphate does not contain nitrogen.

Hence, the correct option is (c).

11. Fibre glass is used for reinforcing purpose.

Hence, the correct option is (b).

12. Melamine, being a thermosetting plastic, contains cross-linked polymeric chains.

Hence, the correct option is (d).

13. Acrylic is a synthetic fibre. Hence, it does not originate from living beings.

Hence, the correct option is (d).

14. H_2S is widely used as an analytical reagent.

Hence, the correct option is (b).

15. The correct matching is:

(i) $\rightarrow$ (D)

(ii) $\rightarrow$ (A)

(iii) $\rightarrow$ (B)

(iv) $\rightarrow$ (E)

(v) $\rightarrow$ (C)

Hence, the correct option is (a).

Assessment Test IV

1. By passing through a strong alkaline solution, CO_2 can be removed.

Hence, the correct option is (c).

2. Difference in the boiling point of liquid nitrogen and liquid oxygen is used to separate nitrogen from liquid air.

Hence, the correct option is (d).

3. Nitrogen and NH_4Cl are formed, when excess of NH_3 reacts with chlorine.

Hence, the correct option is (c).

4. Crystal structure of monoclinic sulphur is like a needle, whereas that of rhombic sulphur is octahedral. In monoclinic sulphur, eight-membered puckered rings are stacked one over the other. However, in rhombic sulphur, they are snuggled into each other. Hence, the density of rhombic sulphur is more than that of monoclinic sulphur. Hence, the correct option is (b).
5. MnO_2 oxidises HCl to chlorine in the laboratory preparation of chlorine. Hence, the correct option is (d).
6. The correct order is BDAC. Hence, the correct option is (b).
7. The correct order is DBAC. Hence, the correct option is (b).
8. Chlorine is used in the manufacture of bleaching powder. Hence, the correct option is (a).
9. Alkalisilicate glass gets dissolved in water. Hence, the correct option is (d).
10. Potassium chloride replenishes potassium. Hence, the correct option is (d).
11. Foam glass is light in weight and used for civil construction and insulating purpose. Hence, the correct option is (c).
12. Teflon is heat and chemical resistant and is made up of linearly linked polymeric units. Hence, the correct option is (a).
13. Rayon is like silk, and acrylic is like wool. Hence, the correct option is (d).
14. H_2S gas is a good reducing agent and is used to detect metals present in the salt, as it can give coloured precipitates with metal salts. Hence, the correct option is (b).
15. The correct matching is:
(i) $\rightarrow$ (E)
(ii) $\rightarrow$ (C)
(iii) $\rightarrow$ (B)
(iv) $\rightarrow$ (A)
(v) $\rightarrow$ (D)
Hence, the correct option is (a).

Pearson IIT Foundation Series

CLASS 8

Chemistry Practice Book

Pearson IIT Foundation Practice Book Series is designed to accompany the course-books available in this series. Developed by a team of experienced faculties, this workbook series connects the subjective knowledge to its real world applications through various text and chapter-level problems. Each chapter has a set of assessment tests which are mapped to chapters covered in the course-book. These assessment tests will guide students step-by-step towards understanding the central concept of that particular chapter. These tests are recommended (after class material) for further practice.
